				[5]			
4			$T - \frac{1}{2}mg = 4ma$	**B1**	**3.1b**	Award for first of these two equations	M1 dependent on at least one B1 earned
			$mg - T = ma$	**B1**	**3.1b**	Signs consistent with first equation	
			$a = \frac{g}{10}$ m s^{-2}, $T = \frac{9mg}{10}$ N	**M1dep**	**1.1a**	Attempting to solve the simultaneous equations leading to either T or a soi	Allow 0.98 m s^{-2}, and
				A1	**1.1b**	Both T and a needed simplified	$T = \frac{441m}{50} = 8.82m$ N
