Question			Answer	Marks	AO	Guidance
7	(a)		$v = 0.6t^2 - 2.1t + 1.5 = 0$ So stationary when $t = 1, 2.5$	M1 A1 [2]	3.1b 1.1	Form quadratic equation and attempt to solve by any method. Cao. May be implied by correct times
7	(b)		$a = 1.2t - 2.1$ When $t = 1$, $a = -0.9$ m s^{-2}	M1 A1FT [2]	3.4 1.1	Attempt to differentiate v. Do not allow if $0.6t$ seen FT their **(a)**
7	(c)		$\int_1^{2.5}(0.6t^2 - 2.1t + 1.5)\,\mathrm{d}t$ $= \left[-\frac{27}{80}\right]$ So distance is $\frac{27}{80} = 0.3375$ m	M1 A1 [2]	3.4 3.2a	Attempt to evaluate definite integral – must be seen but may be evaluated BC. FT their limits for M mark only Do not allow if given as the value of the definite integral
