Question	Answer	Marks	AO	Guidance
3	**DR** Gradient of PQ is $\frac{3-0}{-1-5} = -0.5$	**M1**	**1.1**	May be implied by $\pm\frac{1}{2}$ seen used as gradient. Do not allow if reciprocal of gradient formula used.
	Equation of PQ is $y - 3 = -0.5(x + 1)$	**A1**	**1.1**	$y = -0.5x + 2.5$ or $2y + x = 5$
	Substitution method $3x - 4 = -0.5x + 2.5$	**M1**	**1.1**	Eliminates one variable leading to a value for the other variable
	$x = \frac{13}{7},\ y = \frac{11}{7}$	**A1**	**1.1**	Both correct. Condone 1.86 and 1.57 or better
	Alternative elimination method for final M1A1: $3x - y = 4$ $\underline{x + 2y = 5}$ $6x - 2y = 8$ or $3x - y = 4$ $\underline{x + 2y = 5}$ $\underline{3x + 6y = 15}$	**M1**		Attempt to match coefficients must be seen eg $6x - 2y = 8$ or $3x + 6y = 15$ leading to a value for either x or y
	$x = \frac{13}{7}, y = \frac{11}{7}$	**A1**		Both correct. Condone 1.86 and 1.57 or better
