Question		Answer	Marks	AO	Guidance
8	(a)	$s = 2, u = 0, a = 3.71$ $s = ut + \frac{1}{2}at^2$ gives $2 = \frac{1}{2} \times 3.71t^2$	M1	3.4	Uses *suvat* equation(s) leading to a value of t with $a = \pm 3.71$ Soi
		So $t = 1.04$ s	A1 [2]	1.1	Www. Accept 1.0 but not 1
8	(b)	Normal reaction = weight = $2.5 \times 3.71 =$ 9.275 N (9.28 to 3 s.f.)	B1 [1]	1.1	Allow for 9.3 or better seen
