Question		Answer	Marks	AO	Guidance
9	(a)	$3x^{-2} + x^{\frac{1}{2}}$	**B1** **[1]**	**1.1**	cao
	(b)	$y = \int \left(3x^{-2} + x^{\frac{1}{2}}\right) \mathrm{d}x$	**M1***	**3.1a**	Attempts to integrate at least one term.
		$y = \frac{3x^{-1}}{-1} + \frac{x^{\frac{3}{2}}}{\left(\frac{3}{2}\right)} (+c)$	**A1FT**	**1.1**	Oe At least one correct term on RHS. FT their negative or fractional (a). Need not be simplified. Condone missing $+c$
		When $x = 1, y = -2$ $-2 = -3 + \frac{2}{3} + c$	**depM1**	**1.1**	Uses given information to attempt to find c
		$c = \frac{1}{3}$ so equation is $y = -\frac{3}{x} + \frac{2}{3}x^{\frac{3}{2}} + \frac{1}{3}$	**A1** **[4]**	**1.1**	Any form. Must have $y =$
