Question			Answer	Marks	AOs		Guidance
6			$F[x] = 3x + \dfrac{4x^{\frac{3}{2}}}{\frac{3}{2}}$ oe	M1 A1	2.1 1.1	Attempt at integration; sight of (first term) kx or (second term) $kx^{\frac{3}{2}}$	Allow $+c$
			$F[9] - F[0]$ $27 + \frac{4\times2\times27}{3}$ =99	B1 B1	1.1 2.4	Dep M1; ft their F(x); Accept 27 + 72 =99 **AG**	Must see convincing arithmetic for award of final mark
				[4]
