Question			Answer	Marks	AOs		Guidance
9			H_0: $p = 0.62$	**B1**	**1.1**	Allow null	
			H_1: $p > 0.62$	**B1**	**1.1**	Allow alternative	
						May be seen in hypotheses	
			p is the proportion of adults over 65 in the (UK population) who use the onine social media platform	**B1$**	**2.5**	Allow probability	
			$1 - P(X \leq 45) = 0.0068(1)$	**B1&**	**1.1**	NB from use of B(59, 0.62)	Allow for sight of 0.9932, (from 0.99318902)
			$0.0068 < 0.01$	**M1&**	**1.1**	Comparison of their 0.0068 with 0.01 or 0.68% with 1%; not allowed from point probability	
			Result is significant or "reject H_0"	**A1**	**2.2b**	Depends on B1&M1&	Allow 'accept H_1'
			The evidence suggests that the proportion of adults over 65 (in the UK population) using platform has increased	**E1**	**2.4**	Conclusion in context Depends on all other marks except B1$	OR Critical region ≥ 46 B1 46 in critical region, M1, hence conclusion
			from 62%	**[7]**
