3			LHS is $(\sqrt{9}\times\sqrt{2}) = \sqrt{18}$	**B1**	**2.1**	OR LHS squared is 18	No calculator. No decimal values allowed.
			RHS is $(\sqrt{4}\times\sqrt{3}) = \sqrt{12}$	**B1**	**1.1**	RHS squared is 12	
			$\sqrt{18} > \sqrt{12}$ oe (so $3\sqrt{2} > 2\sqrt{3}$)	**E1**	**2.4**	AG OR eg $\sqrt{3}\times\sqrt{3}\times\sqrt{2} > \sqrt{2}\times\sqrt{2}\times\sqrt{3}$ $\sqrt{3} > \sqrt{2}$, which is true	Allow proof that starts with answer, and shows it must be true.
