			children	[2]			
4	**(a)**		0.0348	**B1** **[1]**	**1.1**	BC 0.03482475	Allow if seen correct to at least 3 sf. We do not want to penalize wrong rounding too often
4	**(b)**		$P(X \leq 4) = 0.013(337876...)$ or $P(X \leq 3) = 0.004(09062\ldots)$ found	**M1**	**3.1a**		Accept $P(X \leq 4) > 0.01$ or $P(X \leq 3) < 0.01$
			Hence 4 is not in CR, or 3 is in CR	**M1**	**2.2a**	Allow M1 for one (correct) of these.	
			so CR is $\{0,1,2,3\}$ or $X \leq 3$	**A1** **[3]**	**3.2a**	Both probabilities must be correct
