Question		Answer	Marks	AO	Guidance
7	(a)	Because it appears that as the mean income increases, the recycling rate decreases	B1 [1]	2.3	Higher rates of recycling occur for taxpayers with lower incomes **or** If line of best fit were drawn it would have a negative gradient
7	(b)		B1 [1]	1.1	**B1** for all 4 circled and no extras
7	(c)	64 300 + 1.5 × (64 300 – 40 350) = 100 225 and the 4 outliers are all data points with mean income **greater than** 100 225, so this supports Umi's statement	M1 A1 [2]	2.1 2.4	ignore calculations / comments concerning recycling rates. Accept UQ + M × IQR where M is a multiplying factor > 1
7	(d)	Weak / no correlation	B1 [1]	2.2b
