5 Part of the graph of $y = \mathrm{f}(x)$ is shown below. The graph is the image of $y = \tan x°$ after a stretch in the x-direction.

(a) Find the equation of the graph. **[2]**

(b) Write down the period of the function $\mathrm{f}(x)$. **[1]**

(c) In this question you must show detailed reasoning.

Find all the roots of the equation $\mathrm{f}(x) = 1$ for $0° \leqslant x° \leqslant 360°$. **[3]**
