9 The equation of a curve is $y = 12x - 4x^{\frac{3}{2}}$.

(a) State the coordinates of the intersection of the curve with the y-axis. **[1]**

(b) Find the value of y when $x = 9$. **[1]**

(c) Determine the coordinates of the stationary point. **[5]**

(d) Sketch the curve, giving the coordinates of the stationary point and of any intercepts with the axes. **[3]**
