Question	Answer	Mark	Mark scheme	Additional guidance
9 (a)	Explanation	C2	full explanation eg explains that both 19 and 22 are terms in the sequence **or** solves $3n + 4 = 21$ to find $n = 17/3$ oe **Acceptable examples** 19 is in the sequence and 19 + 3 is more than 21 The 5th term is 19 and the 6th term is 22 7, 10, 13, 16, 19, 22 17 is not in the 3 times table Because 21 is in the 3 times table and the sequence is plus 4	7, 10, 13, 16, 19, 22, ...
		(C1	for substituting to find a term in the sequence **or** forming an equation eg $3n + 4 = 21$ **or** for a partial explanation or an explanation with some ambiguity) **Acceptable examples** The closest number is 22 $3 \times 6 = 18$, 18 + 4 is higher than 21 19 is in the sequence so 21 can't be in the sequence. Starting at 7 and adding 3 each time won't lead to 21 It's the 3 times table plus 4 21 is in the 3 times table **Not acceptable examples** Adding 4 each time won't lead to 21 It doesn't end up at 21, it goes past it	

Question	Answer	Mark	Mark scheme	Additional guidance
9 (b)	terms given	B1	states two terms eg 7,11 **or** 8,16 **or** 5, 7	
	explanation	C1	explanation eg add one more each time, doubling **Acceptable examples** Add 3 and add 4 The difference goes up by one each time It doubles +1, +2, +1, +2 or indicates +1, +2 repeats itself **Not acceptable examples** It goes up by 1 each time It doubles so $2n$ +1, +2, +3, +4 so $2n + 1$	May be indicated on the sequence with no contradictory statement made
