Question	Answer	Mark	Mark scheme	Additional guidance
19	78	M1	for finding one angle within the triangle is $180 \div 3$ (= 60)	Angles must be clearly labelled on the diagram or otherwise identified.
		M1	for method to use parallel lines, eg $BDE = DBC$ **or** $BCD + CDE = 180$	Correct method can be implied from angles on the diagram if no ambiguity or contradiction.
		C2	(dep M2) for (x =) 78 with a correct reason relating to parallel lines **and** one other correct reason given, with no unused reasons.	If x is clearly identified as 78 award M2 (implied)
		(C1	(dep M1) for one correct reason given for their chosen method, angles in an equilateral triangle are equal alternate angles are equal angles in a quadrilateral add up to 360 angles in a triangle add up to 180 Allied angles / Co-interior angles add up to 180	Underlined words need to be shown; reasons need to be linked to their method, which can be implied from correctly identified angles (stated or written on the diagram).
