| Question | Answer | Mark | Mark scheme | Additional guidance |
|---|---|---|---|---|
| 26 | Shown with reason given | M1 | for deriving a suitable equation,<br>eg $4x + 15 + 2x + 15 + 4x + 8 + 3x - 3 = 360$ or $13x + 35 = 360$<br>**or** $4x + 15 + 2x + 15 = 180$ or $6x + 30 = 180$<br>**or** $4x + 8 + 3x - 3 = 180$ or $7x + 5 = 180$ | May be seen in an equation |
| | | M1 | (dep) for a method to isolate terms in $x$,<br>eg $4x + 2x + 4x + 3x = 360 - 15 - 15 - 8 + 3$<br>**or** $4x + 2x = 180 - 15 - 15$<br>**or** $4x + 3x = 180 - 8 + 3$ | |
| | | A1 | for solving equation to $x = 25$ | |
| | | C1 | for substituting $x = 25$ into $A + B$ or $C + D$ and showing $= 180$, and gives a suitable statement, eg co-interior/allied angles (sum to 180),<br>**or** since $A + B = 180$ the lines are parallel | If starting with an equation = 180 need to substitute into the opposite pair. |
| | | | **Alternative solution assuming it is a trapezium** | |
| | Shown | M1 | for deriving a suitable equation,<br>eg $4x + 15 + 2x + 15 = 4x + 8 + 3x - 3$ or $6x + 30 = 7x + 5$ | |
| | | M1 | (dep) for a method to isolate terms in $x$,<br>eg $15 + 15 - 8 + 3 = 4x + 3x - 4x - 2x$ | |
| | | A1 | for solving equation to $x = 25$ | |
| | | C1 | for a fully correct statement, eg since $A + B = 180$ the lines are parallel | |
