Question	Working	Answer	Mark	Notes
16 (a)		40	P1	for the start of a process to find the number of boxes that will fit along one edge, eg. $240 \div 40$ (= 6) or $150 \div 30$ (= 5) or $140 \div 35$ (= 4) or $240 \div 30$ (= 8) or $240 \div 35$ (= 6.85… ie 6 boxes), etc. or for a process to find a volume, eg. $40 \times 30 \times 35$ (= 42000) or $0.4 \times 0.3 \times 0.35$ (= 0.042) or $240 \times 150 \times 140$ (= 5040000) or $2.4 \times 1.5 \times 1.4$ (= 5.04) NB: condone incorrect or no conversion between m and cm
			P1	for a complete process to find the maximum number of boxes, eg. "6" × "5" × "4" (= 120) or "5040000" ÷ "42000" (= 120) or "5.04" ÷ "0.042" (= 120)
			P1	(dep on P1) for (their number of boxes) ÷ 3, eg. $120 \div 3$ (= 40)
			A1	cao
(b)		explanation	C1	for explaining that it could take more time or it could take less time **with** an appropriate reason, eg. "less space means less number of boxes which will take less time" or "it will take more time since a different arrangement would be required"
