Question	Answer	Mark	Mark scheme	Additional guidance
26	40 missing from frequency scale Incorrect point (50, 5)	C2	Two different statements **Acceptable** eg (50, 5) / the last point is incorrect the last point should be at (45,5) the last point plotted was placed incorrectly for his last point he has plotted by the end of the data and for the rest he has plotted by the middle he did not use the midpoint, he used 50 instead of 45 40 missing (from vertical axis) vertical scale is not linear the frequency doesn't increase in the same intervals the vertical axis is not right **Not acceptable** eg the last point should be at (40, 5) bottom of the polygon should be connected he didn't start the graph at the origin he did not draw a polygon he has plotted the first 4 points at midpoint	Ignore additional statements provided no contradiction
		(C1	One acceptable statement)
