| Question | Answer | Mark | Mark scheme |
|---|---|---|---|
| 18 (a) | Rotation drawn | B2 | correct shape drawn at (−4, −2), (−2, −2), (−1, −4), (−5, −4) |
| | | (B1 | for rotation of the shape by 180° about any centre<br>**or**<br>for any 3 out of 4 vertices correct) |
| (b) | Explanation | C1 | for explanation of why answer is wrong<br>**Acceptable examples**<br>he has reflected (in the line) $y = 3$ / he has used $y = 3$<br>he reflected shape **A** with equation $y = 3$<br>$x = 3$ is supposed to be vertical<br>$x = 3$ means the line of reflection should go through 3 on the $x$-axis<br>it should be on the right of **A**, not beneath it<br>correct reflection in line $x = 3$ shown on diagram with supporting comment eg it should be here<br><br>**Not acceptable examples**<br>he has not reflected the shape (in the line $x = 3$)<br>he has reflected in the wrong line / the reflection line isn't on $x = 3$<br>because the shape is the wrong way<br>he drew it wrong<br>he has used the $y$-axis instead of the $x$-axis |
