Question	Answer	Mark	Mark scheme	Additional guidance
12 (a)	11	B1	cao	
(b)	Yes (supported)	M1	for method to show that 63 is in the sequence, eg starts to list terms of the sequence, with at least 3 correct **or** $6n + 3 = 63$ **or** $(63 - 3) \div 6$ (= 10) **or** $6 \times 10 + 3$ **or (**$63 - 27) \div 6$ **or** $27 + 6 + 6 + 6 + 6 + 6 + 6$	33, 39, 45, 51, 57, 63
		A1	eg Yes **and** 33, 39, 45, 51, 57, 63 Yes **and** $n = 10$ Yes **and** $(63 - 3) \div 6$ is a whole number Yes **and** $6 \times 10 + 3 = 63$ Yes **and** $63 - 27$ is divisible by 6, and the sequence goes up in 6's Yes **and** $27 + 6 + 6 + 6 + 6 + 6 + 6 = 63$ **OR** Like all the other terms in the sequence, it is in the 3 times table but not the 6 times table It's the 10th term / 63 is the 10th term	'Yes' can be implied by an equivalent statement eg '63 is in the sequence' Ignore additional incorrect statements but if the statement contradicts award A0 eg '33, 39, 45, 51, 57, 63, and yes and it's the 11th term' would be M1A0
