Question	Answer	Mark	Mark scheme	Additional guidance
13	105	M1	for a method to find an unknown angle, eg angle *BCD* = 120 **or** angle *BCD* = 360 – 120 – 2 × (180 – 120) (= 120) **or** angle *BCE* = 180 – 120 (= 60) **or** angle *DCF* = 180 – 120 (= 60)	Angles may be seen on diagram. Angles must be clearly labelled on the diagram or otherwise identified.
		M1	for a complete method to find the value of *x*, eg (*x* =) 360 – "120" – 45 – 90 (= 105)	
		C2	for 105 as the answer **and** full reasons for their method, eg vertically opposite angles are equal OR vertically opposite angles are equal angles in a quadrilateral add up to 360 **or** angles on a straight line add up to 180 angles at a point add up to 360 angles in a quadrilateral add up to 360 **or** angles on a straight line add up to 180 angles in a quadrilateral add up to 360	Underlined words need to be shown; reasons need to be linked to their method; if student gives any reasons not linked to their method, award maximum C1 only Accept " ∠s " for "angles" Accept "4-sided shape" for "quadrilateral"
		(C1	(dep M1) for one correct reason)	For C1, ignore any reasons not linked to their method
