18 There are 240 cans of drink on a shelf.
Each can contains cola or lemonade or orange.

$$\text{the number of cans of cola} : \text{the number of cans of lemonade} : \text{the number of cans of orange} = 5:3:2$$

$\frac{1}{2}$ of the cans of lemonade and $\frac{1}{12}$ of the cans of orange are removed from the shelf.

Work out the number of cans of cola as a percentage of the total number of cans of drink remaining on the shelf.

%

(Total for Question 18 is 5 marks)
