Question			Answer	Marks	AOs		Guidance
6	(i)		Arithmetic sequence with $a=50,\ d=20$ $S_{24}=\frac{24}{2}\left(2\times 50+\left(24-1\right)20\right)$ = £6720	**M1** **A1** **[2]**	**1.1a** **1.1b**	Using appropriate formula for sum of an arithmetic sequence with $a=50,\ d=20$ Allow full credit for any correct method	Allow for total written out in full
	(ii)		Each month is 12% more than the previous, so multiplied by 1.12 giving a geometric sequence with $a=50,\ r=1.12$	**E1** **[1]**	**2.4**	Clear argument must include the value 1.12	
	(iii)		Geometric sequence with $a=50,\ r=1.12$ $S_{24}=\frac{50\left(1.12^{24}-1\right)}{0.12}$ = £5907.76 which is less than Aleela	**M1** **A1** **E1** **[3]**	**3.1a** **1.1b** **2.1**	Using appropriate formula for sum of a geometric sequence with $a=50,\ r=1.12$ Allow any suitable rounding FT their values (dep on earning the M marks in part (i) and (iii).)	Allow for total written out in full
