2			$\dfrac{\left(a+\sqrt{2}\right)\left(3+\sqrt{2}\right)}{\left(3-\sqrt{2}\right)\left(3+\sqrt{2}\right)}$	**M1**	**1.1a**	Attempt to rationalize the denominator	
			$=\dfrac{3a+a\sqrt{2}+3\sqrt{2}+2}{9-2}$	**M1**	**1.1a**	Attempt to expand the brackets	
			$=\dfrac{3a+2}{7}+\dfrac{a+3}{7}\sqrt{2}$	**A1** **[3]**	**1.1**	must be in the form $p+q\sqrt{2}$ Mark final answer	Allow for instead stating $p=\dfrac{3a+2}{7}, q=\dfrac{a+3}{7}$
