Question			Answer	Marks	AOs	Guidance	
12			Normal reaction $mg\cos 15°$	**B1**	**3.1b**	Correct normal reaction	
			Max friction $\mu N = 0.4mg\cos 15°$	**M1**	**1.1b**	Attempt to evaluate friction FT their normal reaction.	Only allow $0.4mg$ if it is clear that mg is their normal reaction and not just weight
			Resolve down the slope $mg\sin 15° - F = ma$	**B1**	**1.1b**	Correct component of weight seen ($2.536m$)	
			$mg\sin 15° - 0.4mg\cos 15° = ma$ giving $a = -1.25$ m s^{-2}	**M1**	**3.1b**	All terms present; allow sign errors, sin/cos interchange for weight and their F	
				A1	**1.1b**	Correct equation (a need not be explicitly evaluated here)	
			Using $v^2 = u^2 + 2as$ $0^2 = 1.2^2 + 2\times(-1.25)s$	**M1**	**3.1b**	Use of *suvat* equation(s) leading to a value for s using $v = 0$	
			giving $s = 0.576$ m	**A1** **[7]**	**1.1b**	FT their negative a
