Question			Answer	Marks	AO	Guidance	
2			$\frac{13-x}{(x-3)(x+2)} = \frac{A}{(x-3)} + \frac{B}{(x+2)}$				
			$13-x = A(x+2)+B(x-3)$	**M1**	**1.1a**	Clearing the denominators oe	
			$A=2,\ B=-3$				
			So $\frac{2}{(x-3)} - \frac{3}{(x+2)}$	**A1** **A1**	**1.1b** **1.1b**	For one correct coefficient Correct partial fractions seen Accept just values for A and B if defined
