Question			Answer	Marks	AO	Guidance
1			using *suvat* with upwards positive $u = 8, a = -9.8, s = 3$ $s = ut + \frac{1}{2}at^2$ $3 = 8t - 4.9t^2$ Solve $4 \cdot 9t^2 - 8t + 3 = 0$	**M1**	**3.4**	Using *suvat* equation(s) leading to a value for *t*. Allow sign errors
			$t = 0.584, 1.05$ s	**A1**	**1.1b**	both values needed. ISW if an inequality is given as the final answer Exact roots are $\frac{40 \pm \sqrt{130}}{49}$
