Question			Answer	Marks	AO	Guidance
1			When $x = 0$ $1 + 0^2 = 1$ and $(1+0)^2 = 1$ Values are equal, which contradicts the statement $1 + x^2 < (1+x)^2$ for all values of x [So the statement is false]	**M1** **A1** **[2]**	**2.1** **2.1**	Using a negative value or zero Must see an explicit comparison between correct values (could be in words or symbols)
