Question			Answer	Marks	AO	Guidance
5	(a)		$\log_{10}(y-k)=\log_{10}2^x$	M1	1.1	Correct use of one of the laws of logs – award if 2^x seen or if $(y-k)=10^{x\log 2}$
			$y=k+2^x$	A1	1.1	LHS must be $y=$ Allow $y=k+10^{x\log 2}$
				[2]		
5	(b)			B1	1.2	General shape correct. Positive and negative values of x should be seen used. FT their exponential (a)
				B1	1.1	y-intercept at $k+1$ on positive y –axis. FT their exponential (a) provided in terms of k
				B1	1.1	Asymptote at k. Horizontal line need not been seen provided the intention is clear
				[3]
