Question			Answer	Marks	AO	Guidance
4						
			Angle AOB $= 60°$ or $\frac{\pi}{3}$ (equilateral triangle)	**B1**	**1.1a**	May be implied by $\frac{1}{6}$ or $\frac{5}{6}$ seen
			Angle in major sector is $2\pi - \frac{\pi}{3}\left(= \frac{5\pi}{3}\right)$	**M1**	**3.1a**	Uses their AOB to find the angle in the major sector soi
			Area of major sector is $\frac{1}{2}r^2\theta = \frac{1}{2} \times 5^2 \times \frac{5\pi}{3}$ $= \frac{125\pi}{6}$	**M1** **A1**	**1.1a** **1.1**	Uses sector formula with their θ soi Accept awrt 65.4 or 65.5
			Alternative method for last 3 marks			
			Area of minor sector is $\frac{1}{2}r^2\theta = \frac{1}{2} \times 5^2 \times \frac{\pi}{3} = \frac{25\pi}{6}$	**M1**		Uses their AOB to find the area of the minor sector soi
			Area of major sector is $25\pi - \frac{25\pi}{6}$ $= \frac{125\pi}{6}$	**M1** **A1**		Subtracts from 25π soi Do not allow for the difference between the areas of the circle and the triangle Accept awrt 65.4 or 65.5
