10			$4x \times \frac{1}{2}\sin 2x - \int \frac{1}{2}\sin 2x \times 4 \, dx$	**M1***	**3.1a**	allow sign errors only, condone omission of dx
			$2x\sin 2x - \int 2\sin 2x \, dx$ **oe**	**A1**	**1.1**	allow omission of dx; may be unsimplified
			$F[x] = 2x\sin 2x + \cos 2x$	**A1**	**1.1**	ignore + c
			$F\left[\frac{\pi}{4}\right] - F[0]$	**M1dep***	**1.1**	must see substitution if F[x] incorrect, otherwise may be implied by correct answer;
			$\frac{\pi}{2} - 1$ **or** $\frac{\pi-2}{2}$ **isw**	**A1**	**3.2a**	allow recovery from bracket error
