13			Let the terms be $\frac{c}{r}, \quad c, \quad cr$	**B1**	**3.1a**	Expressions for three consecutive terms of a GP (any correct form)	
			The geometric mean of first and last is $\sqrt{\frac{c}{r}cr}$	**M1**	**1.1**	Expression for GM of first and last term (any correct form) *FT* their terms	
			$\sqrt{\frac{c}{r}cr} = \sqrt{c^2} = c$; this is the middle term	**E1**	**2.1**	**AG** Correct completion
