14	**(i)**		Angle BDC = $90 - \theta$ (angles of triangle) Angle CDA = θ (Angle ADB = 90° as it is the angle in a semicircle)	**M1** **E1** **[2]**	**2.1** **2.2a**	Including reason Answer given so mark is for reason	Reasons can be given in either order

Question			Answer	Marks	AOs	Guidance	
	(ii)		Triangle ACD, $\tan\theta = \frac{h}{b}$ Triangle BCD, $\tan\theta = \frac{a}{h}$	**M1**	**1.1**	At least one correct expression for tan θ	Alternative method: triangle ACD is similar to triangle DBC
			$\frac{a}{h} = \frac{h}{b} \Rightarrow h^2 = ab \Rightarrow h = \sqrt{ab}$	**E1** **[2]**	**2.1**	Setting expressions equal and correct completion to given answer **AG**
