10			**DR** $\int_e^{\pi} \frac{1}{x} dx = [ln\, x]_e^{\pi}$	**M1**	**1.1a**	May have $ln\,\lvert x\rvert$	Don't allow if '+ c' or if no [ ] or limits but condone no dx
			$ln\,\pi - ln\,e = ln\,\pi - 1$	**A1**	**2.2a**	Convincing completion inc at least 1 intermediate line of working (AG)
