Question			Answer	Marks	AO	Guidance
10				**B1** **B1** **B1**	**3.1a** **2.2a** **2.2a**	Zeroes at 0 and close to -2 and 2 (and no others) Rotational symmetry about the origin (mark intent) General shape (actual values of gradient may be wrong)
				[3]		

Q10. The 3 marks are independent.
The first one is for showing the crossing points are 0 and near to +2 and -2.
The second is for rotational symmetry (or close to).
The third is for the general shape of a positive cubic But do not condone incorrect curvature. Some candidates are drawing y=x, which scores B0B1B0.
In all cases use your judgement and mark the intention of the candidate.
List all 3 marks in the order of the MS.
