Question			Answer	Marks	AO	Guidance
14			$t_1^2 + t_2^2 + t_1 t_2 + \frac{1}{2} = 1^2 + (-3)^2 - 3 + \frac{1}{2}$ $= 1 + 9 - 3 + \frac{1}{2}$ $= 7.5$	B1	2.5	Convincingly showing that the formula gives 7.5
				[1]		

Q14. Candidates must use t_1 and t_2 with values 1 and -3 and show the substitution to get to 7.5 for the B1. Using -1 and 3 is not correct and scores B0.
