Question			Answer	Marks	AO	Guidance
1	(a)		$(1+\frac{1}{2}(3x)+\cdots$	M1	1.1	• Use of binomial expansion as far as $1+\frac{1}{2}(3x)$ • soi by correct answer, nfww
			$\ldots\ldots\ldots\ldots\ldots+\frac{\frac{1}{2}\left(\frac{1}{2}-1\right)}{2!}(3x)^2)$ oe	M1	1.1	• Full expansion up to quadratic term. • Condone e.g. $3x^2$ but not x^2 • soi by correct answer
			$1+\frac{3x}{2}-\frac{9x^2}{8}$ oe	A1	1.1	• Allow exact decimals: $1+1.5x-1.125x^2$ • Ignore cubic and higher order terms. • Mark final answer isw writing terms as a list after correct answer seen, but **A0** if correct answer spoilt by further manipulation
				[3]		
1	(b)		Valid for $\lvert x\rvert<\frac{1}{3}$	B1	1.1	• OR $-\frac{1}{3}<x<\frac{1}{3}$ OR $x<\frac{1}{3}\cap x>-\frac{1}{3}$ • Condone $\lvert x\rvert\leq\frac{1}{3}$ or $-\frac{1}{3}\leq x\leq\frac{1}{3}$ (as $n>0$) • Must be x not e.g. $3x$ • Mark final answer
