Question			Answer	Marks	AO	Guidance
4			$6r^3 = \frac{2}{9}$	B1	3.1a	• Forming a correct equation • Or first 4 four terms seen $6, 2, \frac{2}{3}, \frac{2}{9}$ • soi by correct answer or correct value for r
			$r^3 = \frac{1}{27}$ so $r = \frac{1}{3}$	M1	1.1	• Attempt to solve *their* equation for 4th term of a geometric sequence including taking correct root for *their* equation • *Their* equation must be from an attempt to give 4th term of a geometric sequence e.g. $6r^4 = \frac{2}{9} \rightarrow r^4 = \frac{1}{27}$ so $r = \sqrt[4]{\frac{1}{27}} = 0.438[6 \ldots]$ • May be implied by correct answer • Ignore extra values of r for **M1**
			$(S_\infty =)$ 9	A1	1.1	• cao, nfww • Uses $\frac{a}{1-r}$ to find $S_\infty = \frac{6}{2/3}$, answer must be simplified. • **A0** if other values also found unless explicitly rejected
