**6** **(a)** Quadrilateral KLMN has vertices K $(-4, 1)$, L $(5, -1)$, M $(6, 2)$ and N $(2, 5)$, as shown in **Fig. 6.1**.

**Fig. 6.1**

**(i)** Find the coordinates of the following midpoints.

- P, the midpoint of KL
- Q, the midpoint of LM
- R, the midpoint of MN
- S, the midpoint of NK **[2]**

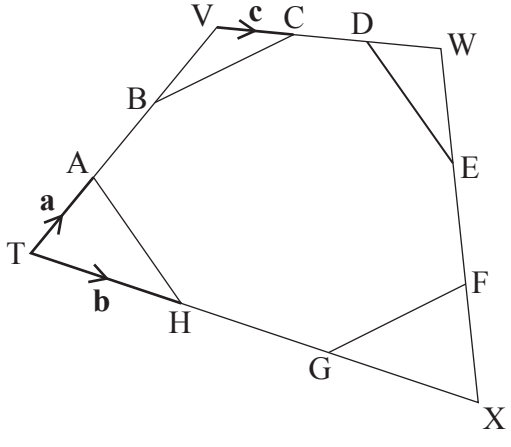

**(ii)** Verify that PQRS is a parallelogram. **[3]**

**(b)** TVWX is a quadrilateral as shown in **Fig. 6.2**.

Points A and B divide side TV into 3 equal parts. Points C and D divide side VW into 3 equal parts. Points E and F divide side WX into 3 equal parts. Points G and H divide side TX into 3 equal parts.

$\overrightarrow{TA} = \mathbf{a}$, $\overrightarrow{TH} = \mathbf{b}$, $\overrightarrow{VC} = \mathbf{c}$.

**Fig. 6.2**

**(i)** Show that $\overrightarrow{WX} = k(-\mathbf{a} + \mathbf{b} - \mathbf{c})$, where $k$ is a constant to be determined. **[1]**

**(ii)** Verify that AH is parallel to DE. **[2]**

**(iii)** Verify that BC is parallel to GF. **[2]**
