

Question	Answer	Mark	Mark scheme	Additional guidance
17	(2, -9)	P1	substitutes $x = 0, y = -5$ into $y = x^2 + ax + b$ ($b = -5$) or substitutes $x = 5, y = 0$ into $y = x^2 + ax + b$ ($0 = 25 + 5a + b$) or starts process to find other intercept, eg writes $y = (x - 5)(x - k)$	x-coordinate of 2 with no or incorrect working gets NO marks
		P1	for complete process to find two intercepts, eg. substitutes the second point into $y = x^2 + ax + b$ and solves to find a ($= -4$) and b ($= -5$) or substitutes $x = 0, y = -5$ into $y = (x - 5)(x - k)$ and solves to find k ($= -1$)	
		P1	(dep on P2) for factorising or completing the square of $x^2 + \text{“-4”}x + \text{“-5”}$ and identifying the x-coordinate of the turning point or for a complete process to find the x-coordinate of the turning point, eg $(5 + \text{“-1”})/2$
