

| Question | Answer | Mark | Mark scheme                                                                                                                                                          | Additional guidance       |
|----------|--------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| 7        | 8.5    | P1   | for process to use the area of $PQRS$ to find the length of $PQ$ ,<br>eg $10y = 45$ <b>or</b> $45 \div 10 (= 4.5)$                                                   | Sets up equation for area |
|          |        | P1   | for process to use the perimeter of $ABCD$ ,<br>eg $2x + 2 \times "4.5" = 26$ <b>or</b> $26 - 2 \times "4.5" (= 17)$ <b>or</b> $26 \div 2 (= 13)$                    | Uses perimeter of $ABCD$  |
|          |        | P1   | for process to use length of $BC$ to find length of $AB$ ,<br>eg solves $2x + 2 \times "4.5" = 26$ <b>or</b> $(26 - 2 \times "4.5") \div 2$ <b>or</b> $"13" - "4.5"$ |                           |
|          |        | A1   | for 8.5 <b>or</b> $8\frac{1}{2}$                                                                                                                                     | Accept $\frac{17}{2}$     |
