

| Question | Answer        | Mark | Mark scheme                                                                | Additional guidance                           |
|----------|---------------|------|----------------------------------------------------------------------------|-----------------------------------------------|
| 17       | Region shaded | M1   | for two of the lines $2y + 4 = x$ , $x = 3$ , $y = 6 - 3x$ correctly drawn | Accept full or broken lines for all marks     |
|          |               | M1   | for all three correct lines correctly drawn                                |                                               |
|          |               | A1   | for a fully correct region indicated with all lines correct                | Award for clear intention, shading not needed |
|          |               |      |                                                                            | Diagram at end of mark scheme                 |
