

Question	Answer	Mark	Mark scheme	Additional guidance
18	Result shown	M1 M1 C1	for angle $OBC = 90$ or for method to find angle OBA or angle OAB, eg $\frac{180-x}{2}$ oe or for angle $ABC = 90 - \text{angle } OBA$, eg angle $ABC = 90 - y$ or marks point on circumference and draws triangle using A and B and point marked for method to find angle ABC, eg $90 - \frac{180-x}{2}$ oe or for $x = 180 - 2 \times \text{angle } OBA$, eg $x = 180 - 2y$ or for angle at circumference = $\frac{1}{2}x$ for correct algebra leading to angle $ABC = \frac{1}{2}x$ and one circle theorem relevant to their method, eg The <u>tangent</u> to a circle is perpendicular to the <u>radius</u> OR for $x = 180 - 2y$ and angle $ABC = 90 - y$ and one circle theorem relevant to their method, eg The <u>tangent</u> to a circle is perpendicular to the <u>radius</u> OR for angle $ABC = \frac{1}{2}x$ and one circle theorem relevant to their method, eg The <u>angle</u> at the <u>centre</u> of a circle is <u>twice</u> the <u>angle</u> at the <u>circumference</u> or <u>Alternate segment</u> theorem	Angles must be clearly labelled on the diagram or otherwise identified. Correct method can be implied from angles on the diagram if no ambiguity or contradiction. Underlined words need to be shown; reasons need to be linked to their method.
