

Question	Answer	Mark	Mark scheme	Additional guidance
19	2 : 5	P1	for using similar triangles to form an equation eg $\frac{AB}{BC} = \frac{AD}{AB}$ oe or $\frac{AB}{4} = \frac{25}{AB}$ oe or $\frac{AB}{4k} = \frac{25k}{AB}$ oe or $AB : 4 = 25 : AB$ oe or $BC \times sf = BD \div sf$ oe or $4 \times sf = 25 \div sf$ oe or for working with the perpendicular height of triangle ABC eg $(h^2 =) 25^2 - 23^2 (= 96)$ or $(h =) \sqrt{25^2 - 23^2} (= \sqrt{96})$	May use x or any other letter for AB
		P1	for process to find AB eg $(AB =) \sqrt{4 \times 25} (= 10)$ oe or $\sqrt{"96" + 2^2} (= 10)$ or for process to find the scale factor eg $\sqrt{\frac{25}{4}} (= \frac{5}{2})$ oe	Accept $AB = 4 \times sf$, $AB = 25 \div sf$
		A1	oe
