

Question		Answer	Mark	Mark scheme	Additional guidance
2	(a)	75	P1	for process to find sum of unknown probabilities eg $1 - (0.10 + 0.30 + 0.05 + 0.25) (= 0.3)$ oe or for process to find number of times dice lands on 3, 4, 5 or 6 eg $(0.10 + 0.30 + 0.05 + 0.25) \times 500 (= 350)$ oe	Award mark for any two probabilities that sum to 0.3 eg in the table or probability of 2 = 0.15
			P1	for a complete process, eg $(\text{“}0.3\text{”} \div 2) \times 500$ oe or $(500 - \text{“}350\text{”}) \div 2$ oe	P1P1A0 for answer of 75:500 or $\frac{75}{500}$
			A1	cao	
	(b)	Answer to part (a) will be greater	C1	for an explanation that the answer will be greater Acceptable examples It makes the answer an underestimate The number will be higher The answer will increase / will go up The number of 2s will increase It would be more than [75] Not acceptable examples My answer will change My answer is incorrect The calculation will change The probability will change It would make the probability of 2 go up My answer won't change	Where [75] is their answer to (a)
