

Question	Answer	Mark	Mark scheme		Additional guidance
5	No	P1	calculates area of trapezium eg $\frac{1}{2} \times 7 \times (10+16)$ (= 91)		[area of trapezium] needs to be clearly stated if the process of finding the area is not clear
	(supported)	P1	for division by coverage eg $\div 2$ or [area of trapezium] $\div 2$ (= 45.5) or process to find coverage per tin eg 5×2 (= 10)	for process to find number of tins bought eg $160 \div 16.99 = 9$ tins	
		P1	for division to find the number of tins eg $\div 5$ or “45.5” $\div 5$ (= 9.1) or [area of trapezium] $\div$ “10” (= 9.1)	for using whole no. of tins to find total litres eg 9×5 (= 45)	
		P1	(dep on at least P2) for a process to multiply a whole number of tins (rounded up) by 16.99	(dep on at least P2) for a process to find the total coverage eg “45” $\times 2$ (= 90)	
		C1	for ‘No’ supported by correct figures eg 169.9 or 90 and 91		There must be a conclusion (“No” or equivalent wording) including the figure 169.9 and working showing processes followed.
