

| Question |     | Answer      | Mark | Mark scheme                                                                                                                                                                                                                                                   | Additional guidance                                                                                                                                                                       |
|----------|-----|-------------|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 11       | (a) | Explanation | C1   | eg ‘No’ the median is 57                                                                                                                                                                                                                                      |                                                                                                                                                                                           |
|          | (b) | Comparison  | C1   | (ft) a correct comparison of medians eg the median weight for Megan was greater than the median weight for Amy                                                                                                                                                | Simply quoting values for median, range and IQR is insufficient, they must be compared                                                                                                    |
|          |     |             | C1   | a correct comparison of a measure of spread eg the interquartile range of weights for Megan was greater than the interquartile range of weights for Amy<br>For the award of both marks at least one of the comparisons must be in the context of the question | <div>Median   Range   IQR</div> <div> Megan      57      49      26 Amy        42      47      16 </div> Figures given must be correct.<br>Comparisons can relate to the range or the IQR |
