

Question	Answer	Mark	Mark scheme	Additional guidance
25	9.75	P1 P1 B1 P1 A1	process to find the gradient of L $\left(= -\frac{3}{2} \right)$ process to find the gradient of the perpendicular line M eg use of $-\frac{1}{m}$ or states gradient as $\frac{2}{3}$ or $y = \frac{2}{3}x + c$ (indep) gives y coordinate of <i>B</i> = 8.5 oe (dep P2) process to find x coordinate of <i>C</i> (= 3) or y coordinate of <i>C</i> (= 4) eg the first stage of solving equations or using elimination by substitution, to find a coordinate of <i>C</i>. 9.75 oe	Could be indicated other ways, eg 8.5 on the y axis of a diagram ft their linear equation for M with L; allow some error in manipulation of these linear equations as long as the overall process is correct. Award 0 marks for a correct answer with no supportive working.
