

Question	Answer	Mark	Mark scheme	Additional guidance
16 (a)	Bar of height 2.4 cm (fd = 1.2) drawn for interval 40 – 60 hours	M1	for using area to represent frequency, eg 11.2 (cm ²) represents 28 (students) or for showing correct scale on fd axis, 2 cm = 1 unit or correct process to find the height of bar, eg $\frac{28}{10}$ (= 2.8) or $\frac{24}{20}$ (= 1.2)	May use any unit of area. Can be implied by frequency of 32 or 36.
(b)	120	A1	cao	Can ignore scale if bar is correct
		M1	ft their histogram for method to find total frequency, eg (1.6× 20) + (3.6× 10) + 28 + 24 oe or for method to find total area under the histogram, eg (4 × 3.2) + (2 × 7.2) + (2 × 5.6) + (4 × 2.4) (= 48) oe	Condone 1 error in reading fd values or measurements.
		A1	for 120 ft
