

Question	Answer	Mark	Mark scheme	Additional guidance
10	1.25	B1 P1 A1	for $(\sin a =) \frac{7-2x}{8}$ or $(\tan b =) \frac{1+x}{4}$ for start of a process to solve $\frac{7-2x}{8} = \frac{1+x}{4}$, eg $4(7-2x) = 8(1+x)$ or $28-8x = 8+8x$ or $7-2x = 2(1+x)$ or $7-2x = 2+2x$ or $\frac{7-2x}{8} = \frac{2(1+x)}{8}$ or $\frac{7-2x}{8} = \frac{2x+2}{8}$ for 1.25 oe	Must come from a correct equation
