

Question	Answer	Mark	Mark scheme	Additional guidance
13	Shown	M1	for a method to find the product of any two linear expressions (3 out of 4 terms correct or 4 terms ignoring signs) eg $2x^2 - 2x + 3x - 3 \left(= 2x^2 + x - 3 \right)$ or $x^2 - x + 2x - 2 \left(= x^2 + x - 2 \right)$ or $2x^2 + 4x + 3x + 6 \left(= 2x^2 + 7x + 6 \right)$	Note that, for example, $2x^2 + x$ in the expansion of $(2x + 3)(x - 1)$ is regarded as 3 correct terms
		M1	(dep on M1) for a complete method to obtain all terms, half of which are correct (ft their first product) eg $2x^3 - 2x^2 + 3x^2 + 4x^2 - 3x - 4x + 6x - 6$ or $2x^3 - 2x^2 + 4x^2 - 4x + 3x^2 - 3x + 6x - 6$ or $2x^3 + 4x^2 + 3x^2 + 6x - 2x^2 - 4x - 3x - 6$ or $2x^3 + 4x^2 + x^2 - 3x + 2x - 6$ or $2x^3 + 2x^2 + 3x^2 - 4x + 3x - 6$ or $2x^3 - 2x^2 + 7x^2 - 7x + 6x - 6$	First product must be quadratic with at least 3 terms but need not be simplified or may be simplified incorrectly
		C1	for $2x^3 + 5x^2 - x - 6$ from correct working	Accept $a = 2, b = 5, c = -1, d = -6$ Condone $-1x$
